### DETAILED ACTION

1. The after-final amendment filed on 28 March 2006 have been received and entered. Claims 1, 3-7, 9-11, 17 and 20-21 were previously indicated as allowable subject matter. The applicant has cancelled claims 12-16 and 22. Claims 1, 3-7, 9-11, 17 and 20-21 are pending in the application.

#### *Allowable Subject Matter*

2. Claims 1, 3-7, 9-11, 17 and 20-21 are allowed.

3. The following is an examiner's statement of reasons for allowance: The present invention teaches a method for detecting application spoofing in displays such as certified flight deck displays that allow the mixed use of a certified avionics display to display information from non-certified sources. Each of the independent claims identifies either the distinct feature of "maintaining the displaying of the certified display on the display area while simultaneously displaying the information from the non-certified source and displaying the information on the display area in front of the certified display so that the information is visible on the avionics display, at least a portion of the certified display is visible on the avionics display and the information covers a portion of the certified display that would otherwise be displayed" or the distinct feature of providing the non-certified source with a false indication of the size of the display area so that the non-certified source does not address the entire display area. The closest prior art, McElreath U.S. Patent 6,401,013 and Doll et al. European Patent 429,387 teaches the mixed display of certified and non-certified information on an aircraft having a certified flight

deck display. In the case of the McElreath reference, McElreath teaches partitioning the flight deck display in order to display both certified and non-certified information. In the case of the Doll reference, Doll teaches the display of non-certified information within the display of certified information. However, the prior art fails to teach displaying the information on the display area in front of the certified display so that the information is visible on the avionics display, at least a portion of the certified display is visible on the avionics display and the information covers a portion of the certified display that would otherwise be displayed, or providing the non-certified source with a false indication of the size of the display area so that the non-certified source does not address the entire display area. Thus, the prior art fails to anticipate or render the above limitations obvious.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
